--~~Abstract~~ ABSTRACT OF THE DISCLOSURE

~~It is an object of the invention to provide a cooking apparatus which can keep a food warm at a proper temperature without damaging the food.~~

The An interior of a heating chamber [[12]] is heated by a heating chamber interior heating means heater [[13]] and steam is supplied into the heating chamber [[12]] by a steam supply means supplier [[18]]. At the then time, since a control part [[19]], based on the

temperature of the interior of the heating chamber detected by a heating chamber temperature ~~detect means~~ detector [[20]] or according to a predetermined time scheme, controls the heating chamber interior ~~heating means~~ heater [[13]] and steam ~~supply means~~ supplier [[18]] in such a manner that the interior of the heating chamber [[12]] provides a given temperature, a food [[11]] can be maintained at a heat retention temperature suitable for keeping the food warm and moist. This can solve ~~the problem~~ problems ~~found in the conventional cooking apparatus that, such as~~ drying and burning of the surface of the food ~~dries and burns.--~~
